## CAR BLOCKS

Nolan's lightweight, strong, and easy to install Car Blocks are fabricated from tough alloy carbon steel. They are designed using a rotating cam locking device for added safety, serving as a heavyduty wheel chock. The greater the force that is applied to the cam, the more tightly the car block grips the rail. The lock is so secure, it can be used to prevent railcar movement on barges. Model # C-3 is specifically designed as a crane block where overhead cranes are used. Refer to the wheel diameters in the table below.

## NOTE: Nolan's car blocks are designed for <u>flat track</u> only. Do not use on grades.

**C-1** 

**C-2** 

| MODEL # | WHEEL DIAMETER          | RAIL SIZE               | WEIGHT     |
|---------|-------------------------|-------------------------|------------|
| C-1     | 10", 12", 24", 34"      | 60 - 85 lb rail         | 30 lbs     |
|         | (254, 305, 610, 864 mm) | (27 - 39 kg)            | (13.61 kg) |
| C-2     | 28" - 36"               | 85 - 140 lb rail        | 38 lbs.    |
|         | (711 -9 14 mm)          | (39 - 63 kg)            | (17.24 kg) |
| C-3     | 33", 36"                | 105 - 175 lb crane rail | 45 lbs     |
|         | (838, 914 mm)           | (48 - 79 kg)            | (20.41 kg) |
